- Web frameworks:
  - PHP Laravel
  - Python Django
- Database technologies:
  - MySQL
- Programming Languages
  - Familiar with Python, C# and Java

LANGUAGES

- English
- Shona

PROFILE

A recent Graduate from Africa University. My studies often involved participating in several web development projects, from designing the front-end user interface, to implementing the backend logic and integrating with databases. I've worked on creating responsive, user-friendly web applications using frameworks such as Laravel and Django. As well as fundamental mobile development with Flutter. I aspire to continue growing my skills and become a versatile software engineer, capable of delivering high-quality, scalable, and innovative solutions that meet modern demands.

I would describe myself as a naturally creative individual with an open mindset, and I would like to put these characteristics to use within your organization. Given the opportunity, I feel I'd be a worthy addition your ranks.
